

Recommended Flies for Hallington

A Month-by-Month Guide

by

Phil Bilbrough

The list below is by no means exclusive, rather it is a starting point for anglers new to Hallington. Many experienced anglers will have most, if not all, of these flies already in their boxes. Beginners on a budget and members who may occasionally struggle to catch should find the list useful as it covers most eventualities at the two reservoirs. All of the flies are available commercially from good tackle shops and by mail order.

Many of the flies listed will catch fish throughout the season, not just in a specific month but I have tried to indicate when they will be most useful. This explains the repetition towards the end of the season. For example, if conditions are right, a G&H Sedge will catch best in August and September but will also work whenever fish are moving at the surface.

Fishing methods are many and varied but in general, lures and wet flies are fished quickly and imitative patterns such as nymphs and pupae more slowly to copy the movement of the naturals. Dry flies fished on the surface may be left motionless or retrieved slowly. For most of the season a floating fly line is all that will be needed but it sometimes helps to get the flies deeper if the weather is cold or if it is hot and bright. Midge-tip, sink-tip and intermediate lines are usually enough for bank fishing but for boat fishing medium and fast-sinking lines can sometimes be useful.

APRIL:

Lures: Humungus, Cat's Whisker, Black Fritz, Viva, Yellow Dancer, Dawson's Olive (all size 10)

Wet Flies: Black Pennel, Blae and Black, Cormorant (10-14)
